📦 Release Notes – EasySaveProSoft v3.0

🚀 New Features

- **Remote Console Integration**
  Remotely control and monitor backup jobs over the network using a built-in client interface. Supports pause, resume, and stop commands in real time.

- **Single Instance Enforcement**
  Prevents launching multiple instances of the application. If already running, it brings the existing instance to the foreground.

- **Parallel Backup Execution**
  Ability to run multiple backup jobs in parallel with intelligent resource management.

- **Priority File Management**
  Ensures high-priority files are processed first during backup sequences.

- **Large File Transfer Regulation**
  Prohibits simultaneous transfers of files larger than a defined threshold (n kB) to prevent bandwidth saturation.

- **Blocked Software Detection**
  Backup jobs are **automatically paused** if a critical software package (e.g., business-critical apps) is detected running. Transfer resumes only after the software closes.

- **Real-Time Interaction with Jobs**
  For each backup job or group of jobs, users can:
    - Press **Pause** (takes effect after the current file completes),
    - Press **Resume** to continue,
    - Press **Stop** to terminate the job immediately.

- **Modern UI Overhaul**
  Updated visual interface with consistent styling, modern colors, and logo integration across all views.

🛠 Fixes & Improvements

- Simplified logging options (removed manual file path configuration).

- Removed deprecated features such as "Edit Backup Job".

- Improved responsiveness and stability of the backup progress interface.

- Optimized handling of backup queues under high resource usage.

- Better multilingual string consistency and UI alignment (FR/EN).

- Enhanced error reporting during network or I/O interruptions.
